of information and communication

Department of computer science
and information technology

GUEST SPEAKER

MR ABDELHAKIM BENCHOUIA

Mr Benchouia is a chief digital officer and an IT manager of a well-known Islamic bank in Algeria. Albaraka bank is a part of a group of Albaraka that has over 17 units internationally. (Turkey, South Africa, Jordan, Egypt, etc.) He started as a junior developer working on a variety of business applications. As he progressed in his career in the bank, he started to focus on data-related projects where he founded the business intelligence platform for the bank using an entirely in-house skillset from data warehousing, ETL, and FTR reporting to dashboards and KPIs. When the bank started a digital transformation project, he was appointed to design and implement a roadmap for digital change, which resulted in many initiatives that touched many areas of the bank's activity. Some of them are already implemented, and others are nearly done.

Mr Benchouia shows research interest by publishing seminal papers mainly on practical use cases and feedback experiences.
